

TRUSTLIGHT

Master Research & Strategy Document — Version 4 (Final)

Future of Tech Innovation Challenge · Cybersecurity, Energy & Climate Resilience Track

Patrick Ennin Selby & Emmanuel Akwasi Opoku (Mannie) · Grambling State University

Submission Deadline: February 20, 2026

V4 UPDATES: Year corrected to 2035 (7-10 year window). Binary GREEN/RED only. Yellow removed. Gloria Woodson + Denise Woodson finalized. Video script aligned to PROPEL official structure. Canva manual build guide included.

Section 1: Master Concept Overview

Element	Final Decision
Future Year	2035 (9 years from now — sits in the middle of the 7–10 year window)
Risk	AI-generated misinformation during energy disruptions
User Group	Elderly adults living alone
Character	Gloria Woodson, 73 — Savannah, Georgia
Family Connection	Denise Woodson — Gloria’s daughter, Atlanta (3 hours away)
Product Name	TrustLight
Trust Signal	Binary only: GREEN (verified — act now) or RED (unverified — do not act)
Verification Speed	Under 5 seconds — faster than Gloria finishes reading the alert
Core Devices	iPhone + Apple Watch
Core Software	Apple Intelligence, WeatherKit, HealthKit, Siri, Notifications, Accessibility, iMessage
Health Conditions	Type 2 diabetes (insulin-dependent) + Hypertension
Does It Exist?	No — the specific combination is genuinely original. Verified by research.
Submission Deadline	February 20, 2026

“We come from places where the lights go out and nobody comes. TrustLight is what we wish existed.”

— Patrick Selby & Mannie Opoku — Legacy Line. Final words of every presentation.

Section 2: The Binary Design Decision — Why GREEN and RED Only

This is one of your strongest design arguments. If any judge asks why TrustLight has only two states this is your answer. It is not a limitation — it is the most important human-centered decision in the entire product.

The Core Reasoning

- Gloria's entire crisis is uncertainty. She does not know what is real.
- A middle signal — unconfirmed — tells her we do not know either. That is not a solution. That is a restatement of her problem in a different color.
- Under acute stress the human brain cannot process nuance. It needs one clear instruction: act or do not act.
- A middle state forces Gloria to make a third decision she is not equipped to make while her insulin is degrading and her heart rate is rising.
- TrustLight's purpose is to eliminate the ten seconds of not knowing — not to extend them with ambiguity.

What Happens During the 5-Second Verification Window

- If an alert cannot be immediately verified TrustLight defaults to RED with a time-bound promise: Gloria, this alert has not been confirmed. Treat it as unverified. I will update you in five seconds.
- Five seconds later — not minutes, not an open-ended wait — it resolves to GREEN or RED.
- Gloria is never left in an ambiguous state. She always has a clear instruction.
- A defined five-second window she can hold her breath through is psychologically manageable. Open-ended uncertainty is not.
- Technically achievable: Apple Intelligence processes on-device in milliseconds. WeatherKit data is cached locally. Source pattern matching runs instantly. Five seconds is conservative.

"We removed the middle signal because Gloria's problem is uncertainty — and a middle signal is just uncertainty with better branding. TrustLight gives her a clear answer in under five seconds. GREEN means act. RED means don't. That binary clarity is the entire product."

— Your answer if a judge asks about the two-signal system — memorize this

Section 3: Gloria Woodson & Denise — The Humans at the Center

Judges remember people not slides. Gloria and Denise are the emotional engine of your entire pitch. Every single feature of TrustLight connects back to one of them.

Meet Gloria Woodson — Savannah, Georgia

- 73 years old. Lives alone in Savannah, Georgia.
- Type 2 diabetes — insulin-dependent. Her insulin must stay refrigerated below 77°F or it begins to degrade within 4 to 8 hours of losing power.
- Hypertension — elevated stress or panic during a crisis can trigger a dangerous cardiac event.
- Her iPhone is her most trusted device. She calls Denise every evening at 7pm.
- She has never heard the term AI-generated misinformation. But she has received alerts she was not sure were real.
- When the grid goes down no neighbor checks on her. No one notices if the 7pm call does not come.
- She represents 11.5% of Savannah households — elderly adults living alone — and 26.9 million nationally.
- Type 2 diabetes affects 33% of US adults 65+. Hypertension affects 70%. Gloria is not an edge case. She is the norm.

Meet Denise Woodson — Atlanta, Georgia

- Late 40s. Lives 3 hours away in Atlanta, Georgia.
- Works full-time. Cannot monitor her mother during every emergency.
- Her greatest fear: getting the call too late.
- TrustLight's silent family notification feature exists entirely because of Denise.
- If Gloria has not responded to a verified GREEN alert within 20 minutes Denise's iPhone receives one quiet iMessage: Gloria may need you.
- Denise does not wait for a crisis to become a tragedy before she knows.

Your pitch opening line — every word is deliberate:

"It's 2035. A storm has knocked out the grid in Savannah, Georgia. Gloria Woodson — 73 years old, living alone — watches her iPhone light up with emergency alerts. Evacuate immediately. Stay indoors. Evacuate. Stay. She doesn't know which one is real. Her insulin has been in that refrigerator for six hours. And Denise, three hours away in Atlanta, has no idea any of this is happening."

— Your Hook — Deliver this slowly. Pause after she doesn't know which one is real.

Section 4: TrustLight — The Full Solution

Every feature connects directly back to Gloria or Denise. Nothing exists for complexity. Everything exists because of a real human need.

The Core Problem TrustLight Solves

In 2035, AI can generate emergency alerts that are visually and linguistically identical to real ones. They spread faster than any official correction. For Gloria the problem is not the outage itself — she has managed outages before. The problem is that in the moment she most needs to trust her iPhone she cannot tell what is real. That ten seconds of not knowing is where people make dangerous decisions. TrustLight eliminates that ten seconds — in under five.

Five Steps — How TrustLight Works

Step 1: Alert Arrives on Gloria's iPhone

- ▶ An emergency alert lands during a grid disruption in Savannah in 2035
- ▶ Without TrustLight: Gloria reads it raw, feels panic, makes a decision based on fear
- ▶ With TrustLight: before the alert reaches her eyes in full the verification process has already begun

Step 2: Apple Intelligence Verifies in Under 5 Seconds — Entirely On-Device

- ▶ Apple Intelligence analyzes the alert's source metadata, language patterns, and transmission pathway entirely on Gloria's iPhone — no internet required, no data sent anywhere
- ▶ WeatherKit cross-references the alert's claims against real-time verified weather and utility data cached locally for Savannah, Georgia
- ▶ The system checks whether the alert matches known patterns from legitimate sources: FEMA, Georgia Emergency Management Agency, local utilities
- ▶ Total processing time: under 5 seconds. Faster than Gloria finishes reading the alert.
- ▶ Privacy is absolute: everything happens on her device. Her crisis data never leaves her iPhone.

Step 3: Binary Trust Signal — GREEN or RED Only

- ▶ GREEN — Alert verified. Source confirmed. Act on this now.
- ▶ RED — Alert not verified. Do not act on this. TrustLight will update you immediately.
- ▶ No middle signal. No ambiguity. No open-ended waiting. Gloria always has a clear instruction.
- ▶ If verification takes the full five seconds: Gloria, give me five seconds. Then GREEN or RED. Never left in uncertainty.
- ▶ Under acute stress clarity saves lives. Ambiguity does not. This is the design.

Step 4: Siri Speaks to Gloria in Plain Language

- ▶ Not a wall of text. Not technical terms. A calm familiar voice.
- ▶ GREEN: Gloria, this evacuation order is confirmed by Georgia Emergency Management. Here is what to do first.
- ▶ RED: Gloria, this alert does not match any official source. It is likely false. Stay where you are. I am watching for real updates and will tell you immediately.
- ▶ Voice-first because under panic reading is hard. Hearing is instinctive.

- Siri's calm tone is itself a regulation tool — it reduces Gloria's stress response and supports clearer thinking

Step 5: Health-Aware System + Denise Notification

- **INSULIN TIMER:** The moment grid failure is detected TrustLight starts a silent countdown. At the 4-hour mark: Gloria, your insulin may need attention soon. Practical. Calm. Timely.
- **HEART RATE AWARENESS:** Apple Watch detects elevated heart rate during the crisis. If Gloria's rate spikes Siri gently prompts: Take one slow breath. I am here. Wait for my signal before you decide anything.
- **DENISE NOTIFICATION:** If Gloria has not responded to a verified GREEN alert within 20 minutes Denise's iPhone receives one quiet iMessage: Gloria received a verified emergency alert and has not confirmed she is safe. You may want to check in.
 - Denise does not wait for tragedy. She acts before it happens.
 - All notifications are pre-authorized by Gloria in setup. Nothing shared without her permission.

Apple Ecosystem Map

Apple Technology	Why It Is Necessary for Gloria
iPhone	Gloria's primary trusted device. Verification interface, Siri voice output, and alert processing all happen here. No behavior change required.
Apple Watch	Passive heart rate monitoring without requiring interaction. Haptic confirmation TrustLight is active even when she is not looking at her phone.
Apple Intelligence (on-device)	Processes misinformation detection entirely on Gloria's iPhone in milliseconds. No data sent to servers. Privacy is why TrustLight is uniquely trustworthy.
WeatherKit	Verified real-time weather data cached locally for Savannah. Confirms or contradicts alert claims instantly. Technical backbone of GREEN / RED.
HealthKit	Stores Gloria's diabetes and hypertension profile. Powers insulin countdown timer and heart rate-triggered calm prompts.
Siri	Voice-first interaction. Critical for elderly users under stress. Calm plain-language guidance that reduces panic and supports better decisions.
Notifications	Trust-color-coded signals directly to Gloria's lock screen and Denise's iPhone. Immediate and clear.
Accessibility	Large text, high contrast, VoiceOver. Designed for elderly users from the ground up — not adapted afterward.
iMessage	Powers the Denise notification using infrastructure Gloria and Denise already trust. No new accounts or apps.
Nearby Interaction (UWB)	Future layer: peer-to-peer verified alert sharing with neighbors when internet is completely unavailable.

Section 5: Does TrustLight Already Exist?

Short answer: No. The specific combination is genuinely original. Here is the evidence.

What Exists Today — The Pieces

- ▶ Life Alert, Mercury Alert, Bay Alarm Medical: elderly safety monitoring, fall detection, panic buttons, family notifications — but zero awareness of whether incoming emergency alerts are real or fake
- ▶ My SOS Family and similar apps: family notification during emergencies — but cannot verify whether the emergency alert itself is true or manufactured
- ▶ Institutional AI misinformation detection: exists at government and research level only — not consumer-facing, not on iPhone, not designed for an individual elderly user
- ▶ Apple's own emergency alert system: passes every alert through as received — no verification layer, no trust scoring, no health-aware priority system

What Makes TrustLight Genuinely New

- ▶ No one has combined on-device AI verification + WeatherKit cross-referencing + health-aware prioritization + voice-first Siri delivery + family notification into a single Apple-native experience for elderly users
- ▶ No consumer-facing tool exists to help an individual verify emergency alerts in real time on their own device
- ▶ The binary GREEN / RED system designed specifically for elderly users under stress does not exist anywhere
- ▶ The insulin countdown timer linked to grid failure detection does not exist
- ▶ The Denise notification layer connecting medical dependency to family awareness does not exist

“The pieces exist separately. But no one has brought them together for the individual person sitting alone in her home, on the device she already trusts, with her specific health conditions built in. That gap is Gloria’s gap. TrustLight closes it.”

— Your originality statement — use this if a judge asks whether this already exists

Section 6: STEEP Research Bank

All statistics sourced from Perplexity research. These back every claim in your pitch. Upload this entire document to NotebookLM.

SOCIAL

Gloria's Reality Is Already Documented

- **2.3 million customers lost power during Hurricane Beryl (2024) in extreme heat; approximately 1 in 3 related fatalities were from heat exposure during the outage** — *Nature, 2025*
- **114% increase in emergency department visits among adults 80+ during Hurricane Sandy outage vs. an 11% decline in ages 18 to 64** — *PMC / NCBI*
- **In high-vulnerability neighborhoods storm-driven outages lasted 12.4 hours vs. 7.7 hours in least vulnerable areas — a 61% longer duration** — *TechXplore, 2024*
- **11.5% of Savannah, Georgia households contain an elderly adult living alone** — *US Census / Savannah Regional Data*

Misinformation Is Already the Second Wave of Every Disaster

- **Misleading social media messages consistently outpace official communications during disasters — increasing anxiety, fear, and dangerous decisions** — *PMC Systematic Review, 173 studies*
- **Older adults are MORE likely to unknowingly share misinformation — making them simultaneously the most vulnerable and the most exposed** — *PMC*
- **Disaster misinformation has delayed rescue operations, misdirected resources, and discouraged vulnerable groups from seeking shelter** — *PMC — Hurricane Sandy, Harvey, Irma, Kerala*
- **People readily spread rumors on social media and rarely correct false claims even after debunking** — *NSF Research*

Gloria's Isolation Is an Epidemic

- **37% of US adults aged 50 to 80 experience loneliness; 34% feel socially isolated** — *JAMA, 2023*
- **41% of Americans in their 60s reported loneliness in 2025, up from 32% in 2010** — *AARP / CareScout, 2025*
- **26.9 million older adults in the US are single — up from 20.8 million a decade earlier** — *CareScout*

TECHNOLOGICAL

- **AI-generated fake alerts can spread fear, cause confusion, and erode trust in emergency services** — *Texas A&M Bush School, 2025*

- **AI misinformation during emergencies can disrupt disaster response, cause unnecessary evacuations, and create a secondary crisis** — *PreventionWeb / York University, 2025*
- **AI-related incident reports rose approximately 50% from 2022 to 2024; 2025 incidents already surpassed 2024 within 10 months** — *TIME, 2025*
- **Florida's BEACON AI system generated 4,000+ emergency messages during the 2024 hurricane season — AI alerts are already normalized** — *CF Public, 2024*
- **Many Apple Intelligence models run entirely on-device; Private Cloud Compute ensures user data is never stored or shared with Apple** — *Apple Newsroom, 2025*
- **Type 2 diabetes affects approximately 33% of US adults aged 65 and older** — *CDC National Diabetes Statistics*
- **Hypertension affects approximately 70% of US adults aged 65 and older** — *American Heart Association*
- **Insulin degrades significantly above 77°F within 4 to 8 hours of refrigeration loss** — *FDA / ADA Medical Guidelines*

ECONOMIC

- **US power interruptions cost approximately \$79 billion per year** — *DOE / OSTI*
- **Energy cost burden for US adults 60+: 12.7% of expenditures vs. 10.6 to 11.3% for younger groups** — *University of Maryland / PMC*
- **Misinformation causes misdirected relief operations, delayed rescues, and extended recovery — all adding measurable economic burden** — *PMC*

ENVIRONMENTAL

- **Hurricane Beryl (2024): 2.3 million without power in extreme heat; approximately 1 in 3 fatalities from heat exposure** — *Nature, 2025*
- **Savannah, Georgia: projected days above 96°F to rise from approximately 7 per year to approximately 39 per year by 2050** — *Climate Central*
- **77% of buildings in Savannah face flood risk; 90 of 124 census tracts face significant storm surge risk** — *FEMA / Savannah Regional Data*

POLITICAL

- **Emergency management experts recommend AI-based content-verification tools — but no federal consumer-facing standard yet exists** — *Texas A&M / York University, 2025*
- **Grid cybersecurity leaders argue decentralization demands hardware-based trust architectures — current policy has not caught up** — *Help Net Security, 2025*

Section 7: STEEP Timeline — Three Chunks to 2035

Present this as your future thinking layer. Three time bands each building on the last. The year is 2035 — 9 years from now, sitting comfortably in the 7 to 10 year window judges require.

NOW → 2028: The Problem Is Forming (Years 1–2)

- ▶ Smart grids expand rapidly — solar, batteries, AI-managed load balancing become standard in US homes
- ▶ 73 million Americans will be 65+ by 2030 — largest elderly population in US history
- ▶ AI-generated content becomes indistinguishable from real alerts — Florida already deploys AI emergency messaging at scale
- ▶ Apple Intelligence launches full on-device AI processing — the technical foundation for TrustLight exists right now
- ▶ Misinformation during disasters is documented but not yet treated as a primary emergency management threat
- ▶ THE GAP: Vulnerable people are increasingly dependent on digital alerts with no way to verify them

2028 → 2032: The Crisis Point (Years 3–6)

- ▶ First major documented incidents of AI-generated fake emergency alerts causing mass confusion during grid failures
- ▶ Public trust in digital emergency alerts begins measurably eroding across all demographics
- ▶ Elderly adults become the most exploited demographic: most isolated, least able to verify, highest health stakes
- ▶ AI incident reports more than double from 2024 baseline — misinformation becomes a standard second wave of every disaster
- ▶ No consumer-facing verification tool exists — individuals are on their own
- ▶ Gloria's scenario becomes real across hundreds of American cities
- ▶ Denise gets the call too late

2032 → 2035: Two Possible Futures (Years 7–9)

- ▶ WITHOUT TRUSTLIGHT: Misinformation during energy crises is normalized. Elderly adults stop trusting any alerts including real ones. Mortality rises. Denise's fear becomes every family's reality.
- ▶ WITH TRUSTLIGHT: On-device AI verification becomes the expected standard for emergency communication. Communities that adopted it show measurably better outcomes. A new generation of elder-first crisis technology emerges.
- ▶ Apple's privacy-first on-device architecture proves to be the right foundation — trusted because it never sends Gloria's data anywhere
- ▶ TrustLight becomes the proof of concept for Patrick and Mannie's broader vision: technology built for communities most left behind — in Savannah, in Atlanta, in Accra, everywhere

Section 8: Pitch Deck — 11 Slides (Corrected Final)

Each slide has exactly one job. Build this manually in Canva using a dark navy minimal template. Do not use Canva AI — it rewrites your text and picks wrong images. Build manually for complete control.

Slide	Exact Content + Canva Build Note
1 — HOOK	No title. Body text only: Gloria's opening scenario set in 2035. Dark background. White text. Font size 28. Centered. Nothing else. This slide is pure atmosphere.
2 — THE FUTURE WORLD (2035)	Title: 2035. Three short sentences describing smart grids, AI-managed homes, and the misinformation risk. Subtle dark city background image at 20% opacity from Canva Elements.
3 — THE EVIDENCE	Title: The Data Is Already Telling Us. Three columns: Survival Gap (red headline + stat), Isolation Crisis (blue headline + stat), Rising Threat (green headline + stat). Bold numbers at 48pt.
4 — THE PROBLEM LINE	Delete everything. One text box centered perfectly. White bold text size 40: When the lights go out, the most dangerous thing isn't the dark. It's not knowing why. Nothing else on this slide.
5 — MEET GLORIA & DENISE	Two columns. Left: Gloria's photo from Pexels (search elderly Black woman alone) + her two bullet points. Right: Denise's photo (search Black woman professional) + her two bullet points. Thin white dividing line between columns.
6 — INTRODUCING TRUSTLIGHT	Large centered: TRUSTLIGHT at 64pt bold. Tagline below: Your Personal Truth Layer. Below that: GREEN means act. RED means don't. Right side: iPhone frame element from Canva with green rectangle inside showing VERIFIED — ACT NOW.
7 — HOW IT WORKS	Title: How TrustLight Works. Three numbered blocks: 01 Intercept (bell icon), 02 Verify (shield icon), 03 Signal (checkmark icon). Each block has bold number in color + headline + one sentence. Clean and evenly spaced.
8 — APPLE ECOSYSTEM	Title: Built on Apple. iPhone outline in center from Canva Elements. Six technology labels arranged around it like spokes. Thin lines connecting each to center at 40% opacity. Bottom italic line: Everything runs on-device. Gloria's crisis data never leaves her iPhone.
9 — DENISE'S FEATURE	Title: Silent Family Notification. Slide text: If Gloria hasn't responded in 20 minutes, Denise receives one quiet message. Right side: iMessage bubble element from Canva with text: Gloria may need you. Slightly warmer background tone than other slides.
10 — OUR WHY	Photos of Patrick and Mannie at top in circular crop. Names below. Origin story text in prose not bullets. Final line bold and separate: We built TrustLight because we understand what it means to live somewhere the lights go out and nobody comes.
11 — LEGACY LINE	Delete everything. One centered text box only. Bold white 44pt: TrustLight is what we wish existed. Nothing else. No logo. No names.

Use Canva Arrange tool to center perfectly both horizontally and vertically.

Canva Manual Build Tips

- Go to canva.com → Create a design → Presentation 16:9 → Search pitch deck minimal dark → Apply to all pages
- For Gloria's photo: go to pexels.com → search elderly Black woman alone → download → upload directly into Canva on Slide 5
- For Denise's photo: go to pexels.com → search Black woman professional → download → upload into Canva on Slide 5
- Font to use throughout: Montserrat Bold for titles and key lines. Montserrat Regular for body text.
- Slides 1, 4, and 11 must feel almost empty. If they look crowded remove something.
- Export final deck as PDF Standard for submission

Section 9: Official Video Script — Aligned to PROPEL Structure

Total: 120 to 150 seconds. Follows PROPEL’s official 6-section video structure exactly. Every [PAUSE] is intentional. Apply the 3 P’s throughout: Posture, Pace, Pause.

SECTION 1 — Team Presence (0:00 to 0:15)

[High energy. Quick cuts between Patrick and Mannie. Confident. Each person speaks directly to camera.]

“Hi, I’m Patrick Selby, a Cybersecurity student at Grambling State University. I led the research and human-centered design of TrustLight.”

— PATRICK — Deliver this in under 7 seconds. Confident. Direct.

“And I’m Mannie Opoku, a Computer Science student at Grambling State University. I led the AI strategy and Apple ecosystem integration.”

— MANNIE — Deliver this in under 7 seconds. Match Patrick’s energy.

SECTION 2 — Future Context (0:15 to 0:35)

[One voice narrates. Slow and vivid. Set the world before introducing Gloria. No statistics here.]

“It’s 2035. Nine years from now. Our homes run on AI-managed smart grids — solar panels, home batteries, connected devices all coordinated automatically. But this smarter world has created a new threat most people haven’t considered. AI can now generate emergency alerts that are visually and linguistically identical to real ones. And in the moment people need to trust their phones the most — they can’t.”

— FUTURE CONTEXT — Vivid and believable. Speak like this world already exists.

SECTION 3 — The User and Problem (0:35 to 1:00)

[This is your emotional anchor. Slow down completely here. Make judges feel Gloria before they understand TrustLight.]

“Meet Gloria Woodson. She’s 73, lives alone in Savannah, Georgia, and her insulin needs refrigeration. When a storm knocks out the grid in 2035, her iPhone becomes her only lifeline. But it lights up with emergency alerts — evacuate immediately, stay indoors, evacuate, stay — and Gloria doesn’t know which one is real. [PAUSE] Her

insulin has been in that refrigerator for six hours. And Denise — her daughter, three hours away in Atlanta — has no idea any of this is happening. [PAUSE] Current tools fail Gloria because they pass every alert through without question. In 2035, that is no longer safe enough.”

— GLORIA — Every word matters. Do not rush this section.

SECTION 4 — The AI-Enabled Solution (1:00 to 1:30)

[Energy rises here. You are presenting the solution. Be proud of it. Speak through Gloria’s experience not through features.]

“That’s why we built TrustLight. The moment an alert arrives on Gloria’s iPhone TrustLight begins verifying it — before she finishes reading. In under five seconds Apple Intelligence analyzes the source and language patterns entirely on her device. WeatherKit cross-references real verified weather data for Savannah. And then Siri speaks to her calmly: [PAUSE] Gloria, this alert does not match any official source. Stay where you are. I am watching. [PAUSE] Two signals only. GREEN means act. RED means don’t. Because for Gloria, in that moment, clarity is not a convenience — it is survival. And when she doesn’t respond within twenty minutes Denise’s phone receives one quiet message: Gloria may need you.”

— TRUSTLIGHT — Speak like you built something that matters. Because you did.

SECTION 5 — Apple Integration (1:30 to 1:45)

[Smooth and natural. Integrate Apple technology into Gloria’s story — do not list features in isolation.]

“Powered by Apple Intelligence, iPhone, and Apple Watch, TrustLight runs securely on-device — protecting Gloria’s data while delivering real-time clarity. WeatherKit validates local conditions. HealthKit tracks her insulin timeline and heart rate. And Siri delivers every signal in plain language she trusts. In 2035 privacy is not a feature. For Gloria it is the foundation of trust itself.”

— APPLE INTEGRATION — 15 seconds. Smooth and connected. Not a feature list.

SECTION 6 — Impact and Closing (1:45 to 2:00)

[Stand completely still. Look directly at the camera lens. Mean every single word. Do not rush.]

“Now Gloria doesn’t just survive the crisis — she navigates it with clarity. And Denise doesn’t wait for the call too late. [PAUSE] The future of energy resilience belongs to the people most left behind. [PAUSE] We come from places where the lights go out and nobody comes. [PAUSE] TrustLight is what we wish existed.”

— CLOSE — After your final word hold eye contact for three full seconds. Then fade to black. Do not add anything after the legacy line.

Section 10: Video Production Guide

Lighting — From PROPEL Official Guidelines

- Face a window or light source — light must hit your face directly
- Use a lamp in front of you if filming at night — position it slightly above eye level
- Keep your background clean and neutral — white, grey, or dark navy wall
- Never film with a window behind you — it turns you into a silhouette
- Never film in a dark room or with overhead light only
- If judges cannot see your eyes clearly fix the light before filming anything else

Framing — From PROPEL Official Guidelines

- Camera at eye level — never looking down at a laptop
- Show head and shoulders — do not cut off chin or top of head
- Look into the camera lens — not at yourself on screen
- Sit upright — lean forward slightly when making key points
- Clean background — remove anything distracting from behind you

Sound — From PROPEL Official Guidelines

- Record in the quietest room available
- Turn off fans, AC units, and all devices that hum
- Test your sound for 10 seconds and play it back before filming the real take
- Use earbuds with a built-in microphone rather than laptop's built-in mic
- If judges cannot hear you clearly they cannot score you

Delivery — From PROPEL Official Guidelines + TrustLight Specific Notes

- Eye contact: look into the camera lens at all times during key moments — not at a script beside the camera
- Face: calm and confident. Slight smile at the start. Serious during the problem section.
- Posture: sit or stand up straight. Lean forward slightly when making key points.

- Hands: natural gestures. Do not fidget. Do not touch your face.
- Voice: speak slightly slower than normal. Pause between big ideas. Slow down for your final sentence.
- Stillness: during your most powerful lines — the problem line and the legacy line — your body must be completely motionless
- The legacy line: after TrustLight is what we wish existed hold eye contact for three full seconds then stop. Do not smile. Do not nod. Do not add anything.

The One Creative Choice That Separates Your Video

- Open with Gloria's voice — not yours
- Use ElevenLabs free tier (elevenlabs.io) to generate a warm elderly woman's voice saying one line only: I didn't know which one was real.
- Play this over a black screen for the first 3 seconds before Patrick begins his introduction
- Seven words from Gloria's perspective before you introduce yourselves makes every judge immediately sit forward
- This is unexpected, human, and sets the emotional stakes before a single word about technology has been spoken

Editing — Using CapCut or Canva Video

- Use CapCut (free) or Canva Video (free) for editing
- Problem section (Sections 1–3): slow cuts, 3 to 5 seconds between cuts
- Solution section (Sections 4–5): slightly faster cuts to build energy
- Closing section (Section 6): return to slow and completely still
- Never cut away from a speaker's face during a powerful line — cut during transitional narration only
- Music: search cinematic ambient or emotional minimal piano on pixabay.com/music. Use at 15 to 20% volume throughout. Slight swell during legacy line then fade to silence.
- Text overlays: add large text on screen for five moments only — Gloria's name and city, the problem line, GREEN means act, RED means don't, and the legacy line

Section 11: NotebookLM Instructions

Link: <https://notebooklm.google.com>

Upload These Five Documents

- 1. This document — TrustLight Master Research & Strategy Version 4 Final
- 2. The STEEP Research Brief from your earlier research pipeline
- 3. The official PROPEL challenge brief PDF
- 4. Both team bios: Patrick Ennin Selby and Emmanuel Akwasi Opoku

- 5. Your Perplexity research Google Doc with all source links and statistics

Exact Prompt for Video Script Generation

▸ Using all uploaded TrustLight research and strategy documents write a complete word-for-word video presentation script for our 2-minute Future Vision Video following PROPEL's official 6-section structure. The future year is 2035 — 9 years from now — sitting in the 7 to 10 year window required. Use Gloria Woodson and Denise Woodson as our human anchor throughout. Section 1 Team Presence 0:00 to 0:15: two fast confident introductions, Patrick then Mannie, name major school and role, two sentences maximum each. Section 2 Future Context 0:15 to 0:35: one voice, 2035 world, smart grids and AI misinformation risk, no statistics, vivid and believable. Section 3 User and Problem 0:35 to 1:00: introduce Gloria Woodson, who she is, what she needs, what she struggles with, why current tools fail her, insulin dependency and hypertension as the specific stakes. Section 4 AI-Enabled Solution 1:00 to 1:30: TrustLight through Gloria's point of view, under 5 seconds verification, GREEN or RED only, Denise notification as emotional payoff. Section 5 Apple Integration 1:30 to 1:45: iPhone Apple Watch Apple Intelligence WeatherKit HealthKit Siri, everything on-device, privacy as trust. Section 6 Impact and Closing 1:45 to 2:00: strong memorable close, final words are TrustLight is what we wish existed, hold eye contact three seconds then fade. Format with timestamps and delivery notes in brackets. Total word count must fit 120 to 150 seconds at natural speaking pace.

Other Key Prompts for NotebookLM

- What are the 5 strongest statistics to support our 2035 future scenario?
- What evidence best supports AI misinformation as a growing threat during energy emergencies?
- How does Gloria's health profile connect to documented statistics about elderly vulnerability?
- What weaknesses might judges find in our concept and what does our research say to address them?
- Generate a list of likely judge questions with answers drawn from our research
- Why is a binary GREEN and RED system better than a three-signal system for elderly users under stress?
- Write the complete text content for all 11 TrustLight pitch deck slides formatted as Slide 1 through Slide 11 with title and body text for each

Section 12: Judge Scoring Checklist — Final

Every row must be answered yes before you submit. Run through this the night before deadline.

Category (Points)	Verification Question
Future Vision — 35pts	Is the year 2035 used consistently? Does the pitch paint a specific believable world 7 to 10 years out? Are three STEEP time bands clearly articulated? Does it feel like a TED Talk not a report?
AI + Apple — 30pts	Is Apple Intelligence central and necessary not decorative? Is on-device privacy named as the competitive advantage? Are WeatherKit,

	HealthKit, Siri, Notifications, Accessibility, and iMessage each given specific roles connected to Gloria?
Presentation — 20pts	Does the video follow all six PROPEL sections with correct timing? Are the 3 P's applied: Posture, Pace, Pause? Does the legacy line land as the absolute final words? Is lighting, framing, and sound clean?
Problem Clarity — 15pts	Is Gloria specific with documented health conditions? Is the human pain stated in one sentence? Is scale shown (26.9M)? Is Denise's perspective included? Is the binary design decision explained if asked?

Section 13: Team Origin Story

No other team at this competition has your story. Use it deliberately and personally.

Why Patrick & Mannie Are the Right Team to Build TrustLight
▸ Both Ghanaian — firsthand experience of living where grid reliability is not guaranteed and vulnerable people are the last to receive help ▸ Patrick: Cybersecurity focus on WHY failures happen at the human level — the exact insight that drives TrustLight's binary design philosophy ▸ Mannie: Real IoT and AI anomaly detection research, built occupancy and safety monitoring systems — the technical credibility is grounded in real work ▸ Both driven by mission over status — technology as a tool for community development not personal gain ▸ Mannie's goal: build a tech innovation company in Ghana for underserved youth — TrustLight is a proof of concept for that vision ▸ Patrick's philosophy: build slowly, build honestly, build things that compound — TrustLight embodies exactly that ▸ Together they bring the two things this challenge demands: technical credibility and human empathy
